

Abrasives training by Steinemann

Not all sanding is the same – because every sanding process is different. At Steinemann, we are intensively involved in the aspect of how a high-quality surface can be achieved through the right product and system. We aim to present you with the very best solutions, tailor-made to your individual requirements.

Benefits for trainees:

- Extensive background knowledge and a deep understanding of the wider world of abrasives
- Basic knowledge about the material structure of the abrasives and their influence on the sanding quality
- The right choice of abrasive measured by the required quality of the product

Goals of the Academy:

- Ensuring the required surface quality during the sanding process
- Successful sanding through expert use of the right abrasives
- Knowledge of material properties and their typical areas of application
- Prevention of sanding faults through root cause analysis

Fees:

We will be glad to send you a personal quotation.

Venues:

The course can either be held in the Steinemann Technology Academy at our headquarters in St.Gallen, Switzerland, or on site at the abrasives production facility in Turkey. Alternatively, we can organize local on-premise training events anywhere in the world.
