

Photo cell upgrade

The pneumatic sanding belt control is replaced with a sensor-based and dust-proof photo cell.

Benefits

Operating costs are reduced, with 50% savings being achievable in terms of total compressed air consumption. The use of optical sensors avoids all contact between parts, meaning that occasional pneumatic faults due to pressure changes or soiling can be avoided. Conversion to modern optical sensors reduces the need for maintenance and is easier to monitor, because all parts are located on the operating side.

Suitable for

- Nova
- Nova-S
- Nova-RS
- Nova-RSA

Package contents

- Sensors
- Valves
- Support bracket
- External control
- Installation materials
