The Art of Sanding
To achieve a perfect surface, you should rely on the right partner. Welcome to Steinemann.
Steinemann Technology.

You demand the first-class sanding machine for your business. And much more, too.

Close partnerships with panel manufacturers throughout the world are tangible proof: when it comes to the industrial sanding of surfaces and thickness tolerances Steinemann is the partner of choice. The excellent quality of our machines is just one of the reasons for our leadership. Our technical know-how forms the core of our process expertise, allowing our customers to benefit from an integrated range of products and services matched to their individual requirements. Steinemann provides the response to customers’ practical demands: superb panel quality, maximum system availability and optimal cost efficiency.
Our engineering expertise.  
Because every link in your production chain needs to be just as strong as all the others.

Steinemann’s wide-belt sanding machines are ideal for all substrates such as particleboard, MDF, plywood, OSB, laminates and others. Because we offer such a broad range of model types and working widths – with the added benefits of modular design – you can tailor our machines to suit your individual manufacturing processes and quality requirements. Our latest success story is the SATOS series, with patented mineral cast technology ensures exceptional vibration-free sanding, providing an even higher degree of precision for which Steinemann machines are renowned.
Our abrasives expertise.

Because we engineer the critical link between machine and work piece. Rather than leaving it to chance.

Compatibility between the sanding machine and the abrasive is a critical success factor when finishing panels. Steinemann has developed its own range of abrasive materials and accessories that give customers advantages: on the one hand, ordering from a single source saves time and money in procurement. On the other, the innovative concept ensures even greater precision and consistency in the sanding process.
Our service expertise.

Because our solutions are designed to be not just the most efficient and precise. But also the longest lasting.

Our experienced engineering and manufacturing specialists, seamless customer support processes, as well as service centres throughout the world ensure that Steinemann machines give uninterrupted top-quality performance. Moreover, we are increasingly able to solve service problems remotely, slashing maintenance time and costs. Yet our commitment to protecting your investment goes far beyond service and maintenance: our modular machine upgrades enable existing installations to be adapted to evolving specifications and the latest technological achievements.
Our spare parts expertise.

Because we are determined to prove that Steinemann is the right choice. Day after day, year after year.

A production stop is very costly for a panel manufacturing plant. That is why Steinemann’s logistics service for spare parts is designed to ensure your machines keep running and delivering the quality you expect. Components for all our machines are kept available for many years, and can usually be ordered from stock within 48 hours. Thanks to the OSI PARTS internet platform, Steinemann is also the only provider to allow its customers to identify components, calculate and send their spare parts or replacements orders online – on a 24/7 basis from anywhere in the world.
Our process expertise.

**Because for us, machines, abrasives and services have a clear determination. Your specific benefit.**
With the panel manufacturing industry becoming increasingly global, Steinemann is at home anywhere in the world. In addition to its manufacturing centre in Switzerland, a dense network of branch offices and agencies ensures proximity to markets and customers. Our daily dialogue with the users of our machines is especially beneficial for our R&D department, which is constantly engaged in anticipating the demands and opportunities of the future. No matter how much we innovate, one thing will never change: the characteristic Swiss precision and reliability for almost half a century.

Our company.

Because Swiss innovation and strong international presence make a winning combination in the panel industry.
We would prefer to demonstrate our expertise personally rather than through a brochure. We look forward to your challenge.
